Description

AAV2-CMV-Luciferase was produced in insect Sf9 cells by infection with rBV-inCap2-inRepCap-kozak (V104) (Fig 2) and rBV-CMV-Luciferase (AVA13) (Fig 3).

The vectors were purified through 2 rounds of CsCl ultracentrifugations. The CsCl was removed through buffer exchange with 2 PD-10 desalting columns. The final AAVs are in 1xPBS+100mM sodium citrate+0.001% pluronic F-68 buffer.

The vectors are for research use only, not for any human use.

Quality Control Data

The vectors were sterilized with 0.22µm filter. SDS-PAGE and InstantBlue Staining (Expedeon) verified the purity of the vectors (Fig. 1). Real-time PCR determined the titers of the AAV samples.
