

## **CERTIFICATE OF ANALYSIS**

### **Purified AAV8-empty (Lot 22-176)**

(for research use only)

### **Storage Conditions**

The AAV vectors should be stored at -80°C for long term usage. When storing for frequent use, 4°C is recommended. Avoid storing at -20°C. The plasmid should be stored at -20°C for long term usage.

### **Shelf Life**

5 years when stored at -80°C. (AAV)

### **Shipping Conditions**

Ice packs overnight

### **Description**

AAV8-empty was produced in insect Sf9 cells by infection with rBV-inCap8-inRepCap-kozak-hr2 (V288) (Fig 2).

The vectors were purified through 2 rounds of CsCl ultracentrifugations. The CsCl was removed through buffer exchange with 2 PD-10 desalting columns. The AAVs are in 1xPBS+0.001% pluronic F-68 buffer.

The vectors are for research use only, not for any human use.

### **Capsid Titer**

Lot 22-176: 2E+13 vg/ mL (final diluted)

Acceptance specifications for this part number are lot dependent and subject to change by the manufacturer.

## Quality Control Data

The vectors were sterilized with 0.22 $\mu$ m filter. SDS-PAGE and InstantBlue Staining (Expedeon) verified the purity of the vectors (Fig. 1). OD analysis determined the capsid titers of the empty AAV samples.
