

## CERTIFICATE OF ANALYSIS

### Product

Purified AAV9-CMV-LacZ, (Lot: 23-017)

### Storage Conditions

The AAV vectors should be kept at -80°C for long term storage. When storing for frequent use, 4°C is recommended. Avoid storing at -20°C.

### Shelf Life

5 years when stored at -80°C.

### Shipping Conditions

Dry Ice overnight express shipment

### Description

AAV9-CMV-LacZ was produced in Sf9 cells by infection with rBV- inCap9-K2R-inRep-kozak-hr2 and rBV-CMV-LacZ. The vectors were purified through 2 rounds of CsCl ultracentrifugation. The CsCl was removed through buffer exchange with 2 PD-10 desalting columns.

The final buffer is 1xPBS + 0.001% pluronic F-68 + 100 mM sodium citrate.

These vectors are for research use only and not for any human purposes.

### Quality Control Data

The vectors were sterilized via filtration with 0.22 µm filters. qPCR analysis was used to determine the titer(s) of the AAV sample(s). SDS-PAGE and SimplyBlue Staining (Invitrogen) techniques were used to verify the purity of the vectors (Fig. 1). DNA agarose gel electrophoresis was used to verify genome quality (Fig. 2).
